

CHILD PROTECTION DATABASE

*Follow us and explore the Child Protection database on **JAM DATA**. The child Protection Database can be accessed under “Theme” in the JamData warehouse. There are some 68 indicators relating to children issues that can be accessed here; follow us and access data on children in poverty.*

So visit the Google Play Store or the Apple Store for Android and Apple Devices respectively.

Jam Data

The Jam Data mobile application contains information on some of Jamaica's strategically important indicators. These are primarily socio-economic indicators that can be viewed across various sectors, time periods and regions or parishes of the country. This mobile application can also be used without internet connection after installation and data can be represented using a variety of visualisation objects inclusive of charts, graphs and maps. Query your data, visualise it, and share it by way of email or your preferred social media platform.

Jam Data is part of the Data4Development initiative of PIOJ. Now users have data at their fingertips.

Jam Data mobile app and data are managed by the PIOJ team.
